Hello Mr. Ray:

I left in your cube a CD with the information that I have been able to look at while trying to find a description of how the completion interval is selected in monitoring wells in uranium in-situ mining operations. The contents of the disk is listed below.

I was not able to find any specific reference to how this completion interval is chosen in such wells. I am attempting to get a copy of the permits for the Goliad Project from TCEQ, but I am not sure what results this effort is going to produce. I will keep you informed.
